Languages

English

Hobbies

- Web development
- Software development
- Learning English
- Listening to music
- Watching Movies

Education

- High School – Complete (2019)

I am passionate about

- Software Engineering
- Teaching others
- Learning New things

Employment

Freelancer (2019 – present)
I have worked as a freelance self-taught full stack software engineer for over 4 years. Learning new languages and working with different types of software applications, I gained more experience on how to build any software or web solutions for any type of requirement.

Skills

Frontend Languages

HTML
CSS
JavaScript
TypeScript

Backend Languages

Python
PHP
Java

DBMS System

MySQL
SQLite

Frontend frameworks

React
Bootstrap

Backend Framework

Django
Springboot

GUI Frameworks

JavaFX
Java Swing
WXPython

Other languages

C++
C#

Tools, Software and Platforms

- MySQL Workbench
- Git
- Figma
- Github
- Adobe Illustrator
- Adobe Photoshop
- Gradle
- Maven

With the skills shown above I have the ability to

- Build custom APIs
- Integrate APIs with current application
- Create responsive web pages
- Create fully functional web applications with all the system processes need

Projects

Property Listing Web application

This is a web application created with React and Django. The languages that I have used are Python (Backend language), Java Script, HTML, and CSS as front-end languages. The web application contains profile pages for Admin, Buyer and Agent. This features I have implemented in this application are managing listed properties, user authentication, manage users, and manage agents, buyer-agent chat system and filtering options for filtering properties.

Inventory Management Application for Desktop

This is an inventory management application and includes integrated POS application features like checkout. This application is designed to be used in any type of store with the ability to store any product with different properties like container weight, type, images etc. The programing language I have used is Java with JavaFX GUI framework.

Image Labeling Application

This is an application designed and developed for the peoples who prepare datasets for training ML models. This application provides the ability to mark the objects in an image and label those objects with the location of it in the image. After marking and labeling the objects in the opened images, user can save the data to a JSON file in a structured way
Application contains following features.

QR Code Scanner & Generator

This is an application that I have built for generating and scanning QR Codes. This application provides QR Code customization like changing the Version, Size, colors of the dots in the QR Codes. The language I have used for this application is Python.

Python Console Application to prepare images for a dataset

This is an application I have created to prepare the images to be feed into a neural network when training the ML model. It increases the number of images in the chosen location by applying different transformations to the images.

Tuition class payment records keeping software

I have created this application for teachers to record payment collection information from students. Teacher can add new classes and students and mark whether they have made the payment or not. The database I have used for this is SQLite3. The application is developed in python.
